DICOM Gateway Solution

With the exponential increase in imaging performed outside of the traditional PACS systems over the past years, there is an increasing demand to automate processes, normalize data, centrally store and view non-DICOM images holistically with DICOM images.

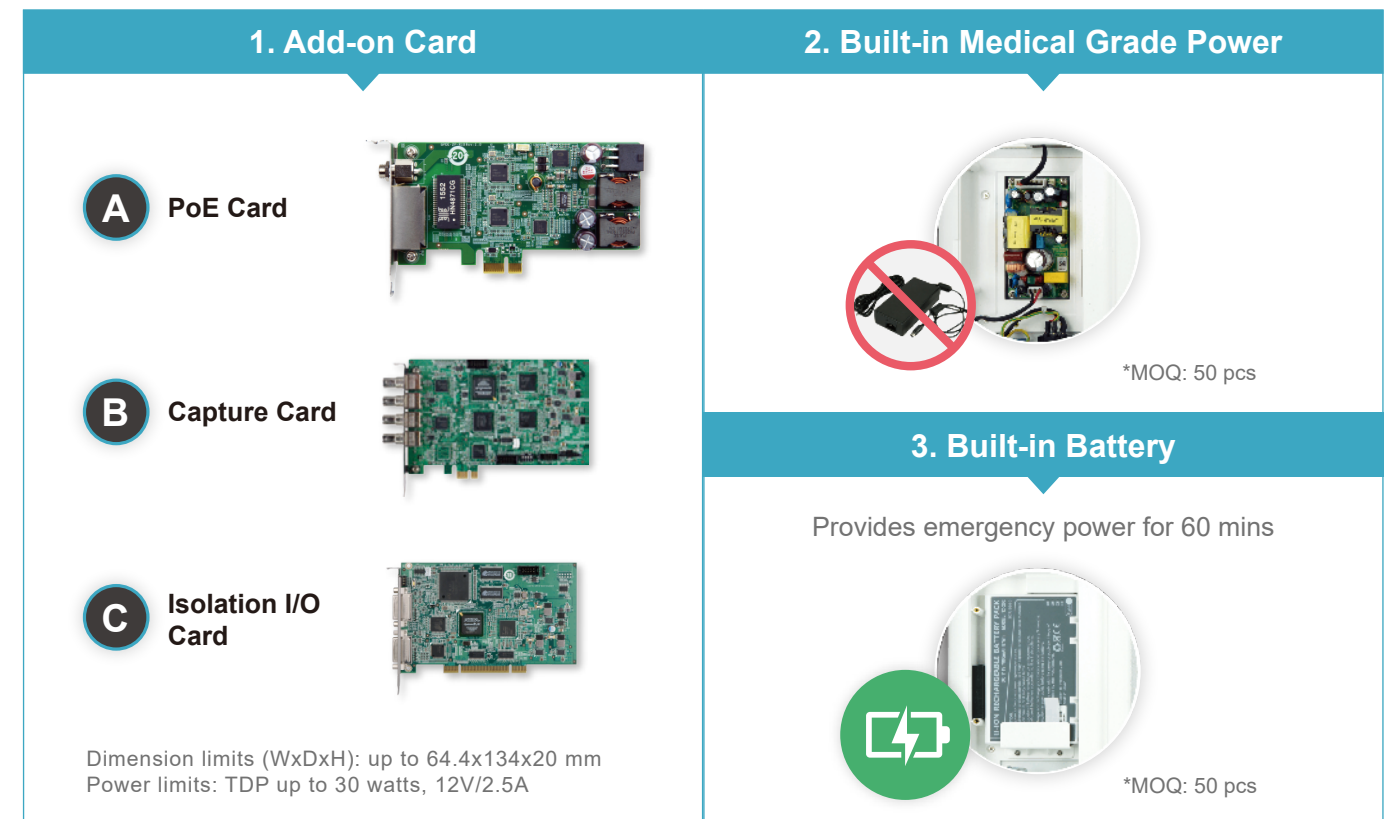

IEI medical team is thriving to roll out intuitive and painless upgrading solutions to help end users cope with the management work of non-DICOM images. Our solution supports flexible cloud-based, local-based and hybrid deployment to meet various demands for different hospitals.

» DICOM Gateway Workflow

» Modular Expansion Design

The highly expandable PCIe x4 slot makes the whole system more flexible and easily meet the individual needs from different applications. For instance, adopting an AI accelerator card to enhance computing power, adding an all-in-one capture card to connect with medical devices, integrating PoE injector card with webcam, or expanding the desired I/O card for multiple usage.
