

## Agent Vi - Company Profile

Agent Video Intelligence is the leading global provider of innovative AI-powered video analytics software solutions for improved security & safety for organizations worldwide. Established in 2003, Agent Vi™ has over 1,000 partners and over 5,000 deployments in more than 90 countries.

## innovi

**innovi™ is Agent Vi's next-generation, feature-rich AI- powered video analytics software platform. innovi provides a broad set of highly sophisticated video analytics capabilities for enhanced security, safety, and business intelligence such as real-time detection of events of interest, rapid search and analysis of recorded video, and extraction of statistical data. Available as a cloud-based SaaS or as an on-premise software, innovi's capabilities meet the needs of any new or existing surveillance installation.**

**As an open-architecture software platform, innovi is applicable to any surveillance system, offering easy integration with 3rd party video management platforms and alarm receiving software. Its scalable robust architecture is applicable to installations of all sizes, with any number of cameras across multiple distributed sites, while offering the most attractive TCO. As a mission-critical SaaS platform, innovi was designed to provide high service availability, full redundancy, seamless automated backups and upgrades, 24/7 network & camera health monitoring, and automated calibration without the need for manual tweaking.**

## Agent Vi's main vertical markets

### Smart Cities

innoVi increases security and safety while supporting a smarter and more efficient use of city resources by detecting security, safety, and traffic incidents and effectively allocating law enforcement personnel. innoVi protects city assets and educational institutions, monitors public areas, prevents vandalism, detects sudden violence and unusual crowd formation, manages large scale events, ensures the city's appearance, detects traffic violations, and enforces parking regulations.

### Transportation

innoVi serves mass transportation customers such as railways, tunnels, bridges, airports & seaports authorities. innoVi enhances safety & security by detecting traffic violations as well as security and safety breaches. innoVi detects crowding, alerts upon blocked emergency exits, sudden violence, breaches to hazardous locations, monitors traffic jams and car accidents, as well as stopped vehicles on highway shoulder/tunnels, and provides road management statistics.

### Critical Infrastructure

innoVi ensures the uninterrupted operation of critical infrastructure sites by increasing the security and safety of facilities & personnel. innoVi produces automatic detections of possible security breaches such as perimeter intrusions, copper theft, and unauthorized access into sterile zones. innoVi offers a centralized, federated architecture that is ideal for large-scale deployments of multiple distributed sites in challenging outdoor environments, across limited bandwidth networks.

### Central Monitoring

innoVi is the ultimate solution for remote guarding services and central monitoring operators, offering improved surveillance capabilities through automated, accurate detection and verification of security breaches, allowing an increased number of monitored sites, while reducing the dependency on human operators. innoVi's federated architecture is integrated with various 3rd party video management systems and alarm receiving software.
